

Train Ticket Booking System:

This project is a web application which was developed in html, css and js. In this project first we should register our mail id and password and then we should login. After first successful login we should enter the detail like date of birth, address, phone No and profile picture and we should submit it.

After submitting the data is stored in Browser Storage. The user is asked to enter the number of rows in the compartment, after that it will display the compartment. And after that the user should enter the number of passengers, after that it will ask for the passenger details like name, age and gender.

After entering passenger details, it will book the seat by the given conditions. That is window seat is allotted to the passenger whose age is above 60, male and female are not placed nearby.
